## FORECAST PEAK WATER LEVELS — NOAA STOPS (next 3 days)

### The Battery

CO-OPS 8518750

#### Peak water level: —

Forecast surge — Observed surge now —

peak Fri 11:30 PM ET

### Kings Point

CO-OPS 8516945

#### Peak water level: —

Forecast surge — Observed surge now —

peak Sat 2:06 AM ET

### Sandy Hook

CO-OPS 8531680

#### Peak water level: —

Forecast surge — Observed surge now —

peak Fri 10:54 PM ET

### Bergen Point

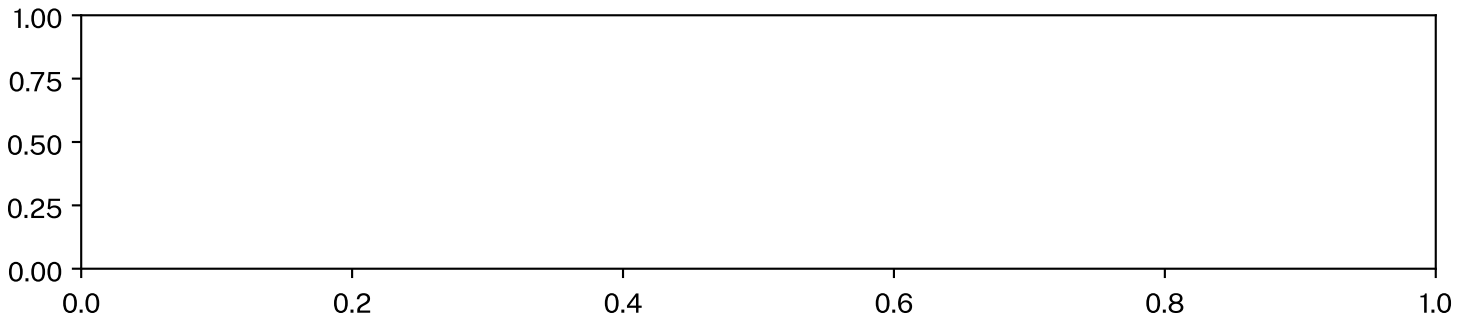

CO-OPS 8519483

#### Peak water level: —

Forecast surge — Observed surge now —

peak Fri 11:18 PM ET

PEAK WATER LEVEL vs MHHW (ft) — above the line = tidal flooding begins

## ACTIVE NYC COASTAL PRODUCTS & ALERTS

 Flood Watch  
New York City

1 in effect

WATCH

HOW TO READ — Water level vs MHHW is the flood-relevant number: 0 = mean higher-high water (an average day's high tide); positive feet means water above that line, where tidal/coastal flooding begins. Forecast surge = how far the forecast peak exceeds the predicted astronomical tide. Observed surge = how far the water sits above predicted tide right now.

RELAYED VERBATIM PER NOAA / NWS — no NYCEM forecast judgment. Forecast: NOAA STOPS-2D-Global total water level (station output). Datums + predicted tide: NOAA CO-OPS. Independent verification recommended before operational use.
